

## Managing Email

**NachoNow! Helps you manage your immediate actions, but often we have many folders that we need to manage, and many messages that need a thoughtful response. With TacoMail, a simple swipe of a thumb allows you to move messages, delete them, or defer them to a later time. Once deferred, they will show up in NachoNow! at the scheduled time, with a reminder.**

▪

**You can easily set up a meeting, or assign an action item based on the message, making it for easier for you to rapidly process and take action. No more fumbling for multiple apps.**
